ACCESSORIES GUIDE

Blue-Tube® UV

Blue-Tube® UV is a germicidal UV light system which is installed inside the central air system (furnace or air handler) for the purpose of preventing mold growth on evaporator coils and to promote improved indoor air quality throughout the home by sterilizing airborne biological contaminants. Blue-Tube® UV improves indoor air quality by killing airborne mold, bacteria, viruses, and allergens. It also keeps the interior of the air system cleaner (the cooling coils in particular) which saves on costly coil cleaning services and also extends the life of the air system.

Aprilaire® Air Purifier – Model 2210

Protect your family and your HVAC system with Aprilaire® 2210 Whole Home Air Purifier. The 2210 features a painted steel cabinet and comes with a 213 Healthy Home Air Filter, which removes most common allergens. Aprilaire® air purifiers trap damaging particles common in most homes to reduce mold, bacteria, pollen, asthma and allergy triggers, pet dander, and viruses.

HVAC Surge Protector

The AG3000 HVAC Surge Protective Device connects to the furnace/air handler disconnect to protect new high-efficiency furnaces, hydronic heating systems, air handlers, central air conditioners, wall-hung boilers, heat pumps and ductless mini-splits from surges. The Green LED indicates surge protection is present.

Please call us at 1-800-252-7337 if you would like us to install an accessory or add it to your upcoming maintenance.

HALO-LED® Whole Home In-Duct Air Purifier

The HALO-LED™ is the industry's first LED in-duct, whole home air purification system that is both mercury free and zero ozone compliant. The HALO-LED™ proactively treats every cubic inch of air-conditioned space, reducing airborne and surface contaminants and pollutants through bi-polar ionization and revolutionary, patent pending, REME-LED™ technology. It reduces airborne and surface microbials, bacteria, viruses, and mold. It also aids in the reduction of smoke, odors, VOCs, allergens, dust and particulates.

REME HALO® Whole Home In-Duct Air Purifier

The REME HALO® in-duct air purifier utilizes RGF's proprietary Reflective Electro Magnetic Energy technology. Installed into the supply plenum of your existing air conditioning or heating system air ducts, the REME HALO® in-duct air purifier produces Hydro-Peroxide plasma that is distributed through the air handler, through the duct system and into the conditioned living space. Unlike passive air technologies, which need pollutants to pass through the unit for purification or filtration, the REME HALO® in-duct air purifier sweeps through your home actively purifying pollutants at the source. In addition, the charged plasma induces particles to coagulate or stick together making them bigger and easier for your filter to catch. Hydroperoxides occur naturally in the earth's atmosphere and are part of nature's process of cleaning the air.

RGFClear Sky MS

The RGFCLEAR SKY Continuous Self-cleaning Ion Generator for mini split HVAC units was developed to produce bi-polar ions in the conditioned space of homes and commercial buildings. This system system has separated quad ion emitters for superior Bi-Polar ionization. The RGFCLEAR SKY reduces particulate, allergens, smoke bacteria, viruses and mold spores. The unit attaches directly to the top of the mini-split using hook and loop fasteners.
